

ENSURING GROWTH & QUALITY

GET NOTIFIED OF ANY ENVIRONMENTAL CHANGES

Cannabis greenhouses need to be constantly monitored to ensure growth and quality. Growing in a controlled environment protects the plants from condition changes that can negatively affect the plants. However, these controlled environments are not enough to ensure precise conditions. Remote monitoring sensors are an added asset that allows you to have an inside look of your greenhouse even when you are not there. If there are any changes to your set environment, our monitoring system notifies you via email or text.

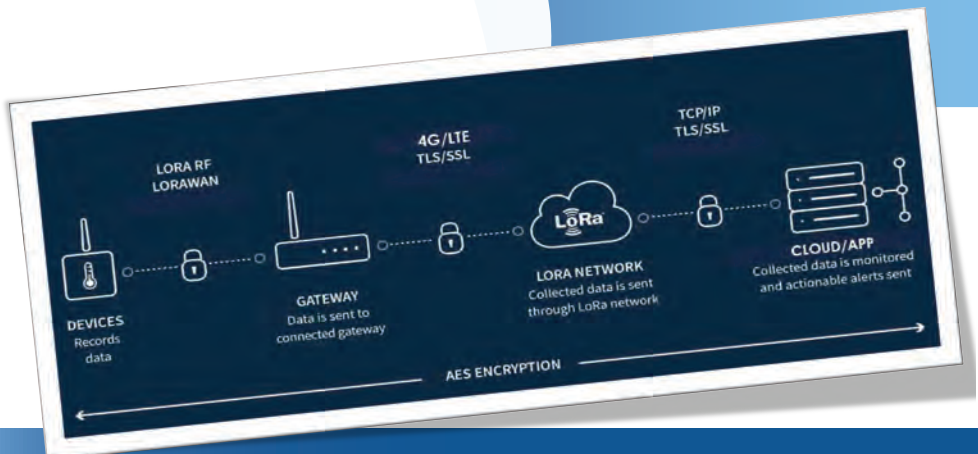

CANNABIS INDUSTRY

The current industry standard is a different sensor for each environmental factor, and SensLynx brings you one of many multi-sensor solutions that covers all aspects of your growing facility.

Our wireless-based sensors offer more than just Temperature; we also monitor:

- Humidity Pressure
- Open / Closed Contact Switches,
- Light Detection
- Soil Moisture and Conductivity Levels
- Water Controls and much more.

SensLynx sensors capture mountains of data and showcases them to you through our user-friendly portal providing easy-to-read insight of your facilities patterns. This data can be used to monitor current status and to prevent future problems.
